SECTION I
Number of Questions: 50

DIRECTIONS for Questions 1 to 5: In each question, the word at the top of the table is used in four different ways, numbered 1 to 4. Choose the option in which the usage of the word is INCORRECT or INAPPROPRIATE.

1. Help

1. This syrup will help your cold.
2. I can’t help the colour of my skin.
3. Ranjit may help himself with the beer in the fridge.
4. Do you really expect me to help you out with cash?

2. Reason

1. Your stand is beyond all reason.
2. Has she given you any reason for her resignation?
3. There is little reason in your pompous advice.
4. How do you deal with a friend who doesn’t listen to a reason?

3. Paper

1. Your suggestions look great on the paper, but are absolutely impractical.
2. Do you know how many trees are killed to make a truckload of paper?
3. So far I have been able to paper over the disagreements among my brothers.
4. Dr. Malek will read a paper on criminalization of politics.

4. Business

1. I want to do an MBA before going into business.
2. My wife runs profitable business in this suburb.
3. If we advertise we will get twice as much business as we have now.
4. How you spend your money is as much my business as yours.

5. Service

1. Customers have to service themselves at this canteen.
2. It’s a service lift; don’t get into it.
3. I’m not making enough even to service the loan.
4. Jyoti’s husband has been on active service for three months.

DIRECTIONS for Questions 6 to 13: The sentences given in each question, when properly sequenced, form a coherent paragraph. Each sentence is labelled with a letter. Choose the most logical order of sentences from among the given choices to construct a coherent paragraph.

6. A. To much of the Labour movement, it symbolises the brutality of the upper classes.
   B. And to everybody watching, the current mess over foxhunting symbolises the government's weakness.
   C. To fox hunting’s supporters, Labour's 1991-manifesto commitment to ban it symbolises the party's metropolitan roots and hostility to the countryside.
   D. Small issues sometimes have large symbolic power.
   E. To those who enjoy thundering across the countryside in red coats after foxes, foxhunting symbolises the ancient roots of rural lives.

1. DEACB  2. ECDBA  3. CEADB  4. DBAEC
7. A. In the case of King Merolchazzar's courtship of the Princess of the Outer Isles, there occurs a regrettable hitch.
B. She acknowledges the gifts, but no word of a meeting date follows.
C. The monarch, hearing good reports of a neighbouring princess, dispatches messengers with gifts to her court, beseeching an interview.
D. The princess names a date, and a formal meeting takes place; after that everything buzzes along pretty smoothly.
E. Royal love affairs in olden days were conducted on the correspondence method.

1. ACBDE  2. ABCDE  3. ECDAB  4. ECBAD

8. A. Who can trace to its first beginnings the love of Damon for Pythias, of David for Jonathan, of Swan for Edgar?
B. Similarly with men.
C. There is about great friendships between man and man a certain inevitability that can only be compared with the age-old association of ham and eggs.
D. One simply feels that it is one of the things that must be so.
E. No one can say what was the mutual magnetism that brought the deathless partnership of these wholesome and palatable foodstuffs about.

1. ACBDE  2. CEDBA  3. ACEBD  4. CEABD

9. A. Events intervened, and in the late 1930s and 1940s, Germany suffered from "over-branding”.
B. The British used to be fascinated by the home of Romanticism.
C. But reunification and the federal government's move to Berlin have prompted Germany to think again about its image.
D. The first foreign package holiday was a tour of Germany organized by Thomas Cook in 1855.
E. Since then, Germany has been understandably nervous about promoting itself abroad.

1. ACEBD  2. DECAB  3. BDAEC  4. DBAEC

10. A. The wall does not simply divide Israel from a putative Palestinian state on the basis of the 1967 borders.
B. A chilling omission from the road map is the gigantic 'separation wall' now being built in the West Bank by Israel.
C. It is surrounded by trenches, electric wire and moats; there are watchtowers at regular intervals.
D. It actually takes in new tracts of Palestinian land, sometimes five or six kilometers at a stretch.
E. Almost a decade after the end of South African apartheid, this ghastly racist wall is going up with scarcely a peep from Israel's American allies who are going to pay for most of it.

1. EBCAD  2. BADCE  3. AEDCB  4. ECADAB

11. A. Luckily the tide of battle moved elsewhere after the American victory at Midway and an Australian victory over Japan at Milne Bay.
B. It could have been no more than a delaying tactic.
C. The Australian military, knowing the position was hopeless, planned to fall back to the south-east in the hope of defending the main cities.
D. They had captured most of the Solomons and much of New Guinea, and seemed poised for an invasion.
E. Not many people outside Australia realize how close the Japanese got.
12. A. Call it the third wave sweeping the Indian media.
   B. Now, they are starring in a new role, as suave dealmakers who are in a hurry to strike
      alliances and agreements.
   C. Look around and you will find a host of deals that have been linked or are ready to be
      finalized.
   D. Then the media barons wrested back control from their editors, and turned marketing
      warriors with the brand as their missile.
   E. The first came with those magnificent men in their mahogany chambers who took on the
      world with their mighty fountain pens.

13. A. The celebrations of economic recovery in Washington may be as premature as that
    "Mission Accomplished" banner hung on the USS Abraham Lincoln to hail the end of the
    Iraq war.
   B. Meanwhile, in the real world, the struggles of families and communities continue unabated.
   C. Washington responded to the favorable turn in economic news with enthusiasm.
   D. The celebrations and high-fives up and down Pennsylvania Avenue are not to be found
      beyond the Beltway.
   E. When the third quarter GDP showed growth of 7.2% and the monthly unemployment rate
      dipped to 6%, euphoria gripped the US capital.

DIRECTIONS for Questions 14 to 21: There are two gaps in each of the following sentences. From
the pairs of words given, choose the one that fills the gaps most appropriately. The first word in the pair
should fill the first gap.

14. The best punctuation is that of which the reader is least conscious; for when punctuation, or lack
    of it, ________ itself, it is usually because it__________.

   1. obtrudes, offends      2. enjoins, fails  3. conceals, recedes  4. effaces, counts

15. The argument that the need for a looser fiscal policy __________to demand outweighs the
    need to __________ budget deficits is, persuasive.

   1. assess, minimize 2. outstrip, eliminate 3. stimulate, control 4. restrain, conceal

16. The Athenians on the whole were peaceful and prosperous; they had ________ to sit at home
    and think about the universe and dispute with Socrates, or to travel abroad and__________ the
    world.

   1. leisure, explore  2. time, ignore  3. ability, suffer             4. temerity, understand

17. Their achievement in the field of literature is described as__________; sometimes it is even
    called _________.

   1. magnificent, irresponsible       2. insignificant, influential
   3. significant, paltry          4. unimportant, trivial

18. This simplified___________ to the decision-making process is a must read for
    anyone__________ important real estate, personal, or professional decisions.

   1. primer, maximizing  2. tract, enacting  3. introduction, under        4. guide, facing

19. Physicians may soon have_______to help paralyzed people move their limbs by bypassing the
    ________nerves that once controlled their muscles.

   1. instruments, detrimental   2. ways, damaged
   3. reason, involuntary        4. impediments, complex
20. The Internet is a medium where users have nearly ________ choices and ________ constraints about where to go and what to do.

1. unbalanced, nonexistent  
2. embarrassing, no  
3. unlimited, minimal  
4. choking, shocking

21. From the time she had put her hair up, every man she had met had groveled before her and she had acquired a mental attitude toward the other sex which was a blend of ________ and ________.

1. admiration, tolerance  
2. indifference, contempt  
3. impertinence, temperance  
4. arrogance, fidelity

DIRECTIONS for Questions 22 to 25: Four alternative summaries are given below each text. Choose the option that best captures the essence of the text.

22. Some decisions will be fairly obvious -"no-brainers." Your bank account is low, but you have a two-week vacation coming up and you want to get away to some place warm to relax with your family. Will you accept your in-laws' offer of free use of their Florida beachfront condo? Sure. You like your employer and feel ready to move forward in your career. Will you step in for your boss for three weeks while she attends a professional development course? Of course.

A. Some decisions are obvious under certain circumstances. You may, for example, readily accept a relative's offer of free holiday accommodation. Or step in for your boss when she is away.

B. Some decisions are no-brainers. You need not think when making them. Examples are condo offers from in-laws and job offers from bosses when your bank account is low or boss is away.

C. Easy decisions are called "no-brainers" because they do not require any cerebral activity. Examples such as accepting free holiday accommodation abound in our lives.

D. Accepting an offer from in-laws when you are short on funds and want a holiday is a no-brainer. Another no-brainer is taking the boss's job when she is away.

23. Physically, inertia is a feeling that you just can't move; mentally, it is a sluggish mind. Even if you try to be sensitive, if your mind is sluggish, you just don't feel anything intensely. You may even see a tragedy enacted in front of your eyes and not be able to respond meaningfully. You may see one person exploiting another, one group persecuting another, and not be able to get angry. Your energy is frozen. You are not deliberately refusing to act; you just don't have the capacity.

A. Inertia makes your body and mind sluggish. They become insensitive to tragedies, exploitation, and persecution because it freezes your energy and decapitates it.

B. When you have inertia you don't act although you see one person exploiting another or one group persecuting another. You don't get angry because you are incapable.

C. Inertia is of two types -physical and mental. Physical inertia restricts bodily movements. Mental inertia prevents mental response to events enacted in front of your eyes.

D. Physical inertia stops your body from moving; mental inertia freezes your energy, and stops your mind from responding meaningfully to events, even tragedies, in front of you.

24. Try before you buy. We use this memorable saying to urge you to experience the consequences of an alternative before you choose it, whenever this is feasible. If you are considering buying a van after having always owned sedans, rent one for a week or borrow a friend's. By experiencing the consequences first hand, they become more meaningful. In addition, you are likely to identify consequences you had not even thought of before. May be you will discover
that it is difficult to park the van in your small parking space at work, but that, on the other hand, your elderly father has a much easier time getting in and out of it.

A. If you are planning to buy a van after being used to sedans, borrow a van or rent it and try it before deciding to buy it. Then you may realize that parking a van is difficult while it is easier for your elderly father to get in and out of it.

B. Before choosing an alternative, experience its consequences if feasible. If, for example, you want to change from sedans to a van, try one before buying it. You will discover aspects you may never have thought of.

C. Always try before you buy anything. You are bound to discover many consequences. One of the consequences of going in for a van is that it is more difficult to park than sedans at the office car park.

D. We urge you to try products such as vans before buying them. Then you can experience consequences you have not thought of such as parking problems. But your father may find vans more comfortable than cars.

25. It is important for shipping companies to be clear about the objectives for maintenance and materials management - as to whether the primary focus is on service level improvement or cost minimization. Often when certain systems are set in place, the cost minimization objective and associated procedure become more important than the flexibility required for service level improvement. The problem really arises since cost minimization tends to focus on out of pocket costs which are visible, while the opportunity costs, often greater in value, are lost sight of.

A. Shipping companies have to either minimize costs or maximize service quality. If they focus on cost minimization, they will reduce quality. They should focus on service level improvement, or else opportunity costs will be lost sight of.

B. Shipping companies should determine the primary focus of their maintenance and materials management. Focus on cost minimization may reduce visible costs, but ignore greater invisible costs and impair service quality.

C. Any cost minimization program in shipping is bound to lower the quality of service. Therefore, shipping companies must be clear about the primary focus of their maintenance and materials management before embarking on cost minimization.

D. Shipping companies should focus on quality level improvement rather than cost cutting. Cost cutting will lead to untold opportunity costs. Companies should have systems in place to make the service level flexible.

DIRECTIONS for Questions 26 to 50: Each of the five passages given below is followed by five questions. Choose the best answer to each question.

PASSAGE I

Pure love of learning, of course, was a less compelling motive for those who became educated for careers other than teaching. Students of law in particular had a reputation for being materialistic careerists in an age when law was becoming known as "the lucrative science" and its successful practice the best means for rapid advancement in the government of both church and state. Medicine too had its profit-making attractions. Those who did not go on to law or medicine could, if they had been well trained in the arts, gain positions at royal courts or rise in the clergy. Eloquent testimony to the profit motive behind much of twelfth-century education was the lament of a student of Abelard around 1150 that "Christians educate their sons... for gain, in order that the one brother, if he be a clerk, may help his father and mother and his other brothers, saying that a clerk will have no heir and whatever he has
will be ours and the other brothers." With the opening of positions in law, government, and the church, education became a means for advancement not only in income but also in status. Most who were educated were wealthy, but in the twelfth century, more often than before, many were not and were able to rise through the ranks by means of their education. The most familiar examples are Thomas Becket, who rose from a humble background to become chancellor of England and then archbishop of Canterbury, and John of Salisbury, who was born a "plebeian" but because of his reputation for learning died as bishop of Chartres.

The instances of Becket and John of Salisbury bring us to the most difficult question concerning twelfth-century education: To what degree was it still a clerical preserve? Despite the fact that throughout the twelfth century the clergy had a monopoly of instruction, one of the outstanding medievalists of our day, R. W. Southern, refers with good reason to the institutions staffed by the clergy as "secular schools." How can we make sense out of the paradox that twelfth-century schools were clerical and yet "secular"?

Let us look at the clerical side first. Not only were all twelfth-century teachers except professionals and craftsmen in church orders, but in northern Europe students in schools had clerical status and looked like priests. Not that all really were priests, but by virtue of being students all were awarded the legal privileges accorded to the clergy. Furthermore, the large majority of twelfth-century students, outside of the possible exception of Italy, if not already priests became so after their studies were finished. For these reasons, the term "cleric" was often used to denote a man who was literate and the term "layman" one who was illiterate. The English word for cleric, clerk, continued for a long time to be a synonym for student or for a man who could write, while the French word clerc even today has the connotation of intellectual.

Despite all this, twelfth-century education was taking on many secular qualities in its environment, goals, and curriculum. Student life obviously became more secular when it moved out from the monasteries into the bustling towns. Most students wandered from town to town in search not only of good masters but also of worldly excitement, and as the twelfth century progressed they found the best of each in Paris. More important than environment was the fact that most students, even though they entered the clergy, had secular goals. Theology was recognized as the "queen of the sciences," but very few went on to it. Instead they used their study of the liberal arts as a preparation for law, medicine, government service, or advancement in the ecclesiastical hierarchy.

This being so, the curriculum of the liberal arts became more sophisticated and more divorced from religion. Teaching was still almost exclusively in Latin, and the first book most often read was the Psalter, but further education was no longer similar to that of a choir school. In particular, the discipline of rhetoric was transformed from a linguistic study into instruction in how to compose letters and documents; there was a new stress on logic; and in all the liberal arts and philosophy texts more advanced than those known in the early Middle Ages were introduced.

Along with the rise of logic came the translation of Greek and Arabic philosophical and scientific works. Most important was the translation of almost all the writings of Aristotle, as well as his sophisticated Arabic commentators, which helped to bring about an intellectual revolution based on Greek rationalism. On a more prosaic level, contact with Arabs resulted in the introduction in the twelfth century of the Arabic numeral system and the concept of zero. Though most westerners first resisted this and made crude jokes about the zero as an ambitious number "that counts for nothing and yet wants to be counted," the system steadily made its inroads first in Italy and then throughout Europe, thereby vastly simplifying the arts of computation and record keeping.

26. According to the author, in the twelfth century, individuals were motivated to get higher education because it:

1. Was a means for material advancement and higher status.
2. Gave people with wealth an opportunity to learn.
3. Offered a coveted place for those with a love of learning.
4. Directly added to the income levels of people.
27. According to the passage, what led to the secularization of the curriculum of the liberal arts in the twelfth century?
1. It was divorced from religion and its influences.
2. Students used it mainly as a base for studying law and medicine.
3. Teaching could no longer be conducted exclusively in Latin.
4. Arabic was introduced into the curriculum.

28. According to the passage, twelfth century schools were clerical and yet secular because:
1. Many teachers were craftsmen and professionals who did not form part of the church.
2. While the students had the legal privileges accorded to the clergy and looked like priests, not all were really priests.
3. The term 'cleric' denoted a literate individual rather than a strict association with the church.
4. Though the clergy had a monopoly in education, the environment, objectives and curriculum in the schools were becoming secular.

29. What does the sentence “Christians educate their sons...will be ours and the other brothers” imply?
1. The Christian family was a close-knit unit in the twelfth century.
2. Christians educated their sons not so much for the love of learning as for material gain.
3. Christians believed very strongly in educating their sons in the Church.
4. The relationship between Christian parents and their sons was exploitative in the twelfth century.

30. According to the passage, which of the following is the most noteworthy trend in education in twelfth-century Europe?
1. Secularization of education.
2. Flowering of theology as the queen of the sciences.
3. Wealthy people increasingly turning to education.

PASSAGE II

While I was in class at Columbia, struggling with the esoterica du jour, my father was on a bricklayer's scaffold not far up the street, working on a campus building. Once we met up on the subway going home—he was with his tools, I with my books. My father wasn't interested in Thucydides, and I wasn't up on arches. My dad has built lots of places in New York City he can't get into: colleges, condos, office towers. He made his living on the outside. Once the walls were up, a place took on a different feel for him, as though he wasn't welcome anymore. Related by blood, we're separated by class, my father and I. Being the white-collar child of a blue-collar parent means being the hinge on the door between two ways of life. With one foot in the working-class, the other in the middle class, people like me are Straddlers, at home in neither world, living a limbo life.

What drove me to leave what I knew? Born blue-collar, I still never felt completely at home among the tough guys and anti-intellectual crowd of my neighbourhood in deepest Brooklyn. I never did completely fit in among the preppies and suburban royalty of Columbia, either. It's like that for Straddlers. It was not so smooth jumping from Italian old-world style to US professional in a single generation. Others who were the first in their families to go to college, will tell you the same thing: the academy can render you unrecognisable to the very people who launched you into the world. The ideas and values absorbed in college challenge the mom-and-pop orthodoxy that passed for truth for 18 years. Limbo folk may eschew polyester blends for sea-isle cotton, prefer Brie to Kraft slices. They marry outside the neighbourhood and raise their kids differently. They might not be in church on Sunday.

When they pick careers (not jobs), it's often a kind of work their parents never heard of or can't
understand. But for the white-collar kids of blue-collar parents, the office is not necessarily a sanctuary. In Corporate America, where the rules are based on notions foreign to working-class people, a Straddler can get lost. Social class counts at the office, even though nobody likes to admit it. Ultimately, corporate norms are based on middle-class values, business types say. From an early age, middle-class people learn how to get along, using diplomacy, nuance, and politics to grab what they need. It is as though they are following a set of rules laid out in a manual that blue-collar families never have the chance to read.

People born into the middle class to parents with college degrees have lived lives filled with what French sociologist Pierre Bourdieu calls “cultural capital”. Growing up in an educated environment, they learn about Picasso and Mozart, stock portfolios and creme brulee. In a home with cultural capital, there are networks: someone always has an aunt or golfing buddy with the inside track for an internship or some entry-level job. Dinner-table talk could involve what happened that day to mom and dad at the law firm, the doctor’s office, or the executive suite. Middle-class kids can grow up with a sense of entitlement that will carry them through their lives. This ‘belongingness’ is not just related to having material means, it also has to do with learning and possessing confidence in your place in the world. Such early access and direct exposure to culture in the home is the more organic, ‘legitimate’ means of appropriating cultural capital, Bourdieu tells us. Those of us possessing ‘ill-gotten Culture’ can learn it, but never as well. Something is always a little off about us, like an engine with imprecise timing.

There’s a greater match between middle-class lives and the institutions in which the middle class works and operates--universities or corporations. Children of the middle and upper classes have been speaking the language of the bosses and supervisors forever. Blue-collar kids are taught by their parents and communities to work hard to achieve, and that merit is rewarded. But no blue-collar parent knows whether such things are true in the middle-class world. Many professionals born to the working-class report feeling out of place and outmanoeuvred in the office. Soon enough, Straddlers learn that straight talk won’t always cut. Resolving conflicts head-on and speaking your mind doesn’t always work, no matter how educated the Straddler is.

In the working-class, people perform jobs in which they are closely supervised and are required to follow orders and instructions. That, in turn, affects how they socialise their children. Children of the working-class are brought up in a home in which conformity, obedience and intolerance for back talk are the norm—the same characteristics that make a good factory worker.

31. Which of the following statements about Straddlers does the passage NOT support explicitly?

1. Their food preferences may not match those of their parents.
2. They may not keep up some central religious practices of their parents.
3. They are at home neither in the middle class nor in the working-class.
4. Their political ideologies may differ from those of their parents.

32. What does the author’s statement, "My father wasn’t interested in Thucydides, and I wasn’t up on arches”, illustrate’?

1. Organic cultural capital. 2. Professional arrogance and social distance.
3. Evolving social transformation. 4. Breakdown of family relationships.

33. When Straddlers enter white-collar jobs, they get lost because:

1. They are thrown into an alien value system.
2. Their families have not read the rules in corporate manuals.
3. They have no one to guide them through the corporate maze.
4. They miss the ‘mom and pop orthodoxy’.

34. According to the passage, the patterns of socialization of working-class children make them most suited for jobs that require

1. Diplomacy. 2. compliance with orders.
3. Enterprise and initiative. 4. high risk taking.
35. According to the passage, which of the following statements about 'cultural capital' is NOT true?

1. It socializes children early into the norms of middle class institutions.
2. It helps them learn the language of universities and corporations.
3. It creates a sense of enlightenment in middle-class children.
4. It develops bright kids into Straddlers.

PASSAGE III

At first sight, it looks as though panchayati raj, the lower layer of federalism in our polity, is as firmly entrenched in our system as is the older and higher layer comprising the Union Government and the States. Like the democratic institutions at the higher level, those at the panchayat level, the panchayati raj institutions (PRIs), are written into and protected by the Constitution. All the essential features, which distinguish a unitary system from a federal one, are as much enshrined at the lower as at the upper level of our federal system. But look closely and you will discover a fatal flaw. The letter of the Constitution as well as the spirit of the present polity have exposed the intra-State level of our federal system to a dilemma of which the inter-State and Union-State layers are free. The flaw has many causes. But all of them are rooted in an historical anomaly, that while the dynamics of federalism and democracy have given added strength to the rights given to the States in the Constitution, they have worked against the rights of panchayats.

At both levels of our federal system, there is the same tussle between those who have certain rights and those who try to encroach upon them if they believe they can. Thus the Union Government was able to encroach upon certain rights given to the States by the Constitution. It got away with that because the single dominant party system, which characterised Centre-State relations for close upon two decades, gave the party in power at the Union level many extra-constitutional political levers. Second, the Supreme Court had not yet begun to extend the limits of its power. But all that has changed in recent times. The spurt given to a multi-party democracy by the overthrow of the Emergency in 1977 became a long-term trend later on because of the ways in which a vigorously democratic multi-party system works in a political society which is as assertively pluralistic as Indian society is. It gives political clout to all the various segments which constitute that society. Secondly, because of the linguistic reorganisation of States in the 1950s, many of the most assertive segments have found their most assertive expression as States. Thirdly, with single-party dominance becoming a thing of the past at the Union level, governments can be formed at that level only by multi-party coalitions in which State-level parties are major players. This has made it impossible for the Union Government to do much about anything unless it also carries a sufficient number of State-level parties with it. Indian federalism is now more real than it used to be, but an unfortunate side-effect is that India's panchayati raj system, inaugurated with such fanfare in the early 1980s, has become less real.

By the time the PRIs came on the scene, most of the political space in our federal system had been occupied by the Centre in the first 30 years of Independence, and most of what was still left after that was occupied by the States in the next 20. PRIs might have hoped to wrest some space from their immediate neighbour, the States, just as the States had wrested some from the Centre. But having at last managed to checkmate the Centre's encroachments on their rights, the States were not about to allow the PRIs to do some encroaching of their own. By the 1980s and early 1990s, the only national party left, the Congress, had gone deeper into a siege mentality. Finding itself surrounded by State-level parties, it had built walls against them instead of winning them over. Next, the States retaliated by blocking Congress proposals for panchayati raj in Parliament, suspecting that the Centre would try to use panchayats to by-pass State Governments. The suspicion fed on the fact that the powers proposed by the Congress for panchayats were very similar to many of the more lucrative powers of State Governments. State-level leaders also feared, perhaps, that if panchayat-level leaders captured some of the larger PRIs, such as district-level panchayats, they would exert pressure on State-level leaders through intra-State multi party federalism.

It soon became obvious to Congress leaders that there was no way the panchayati raj amendments they wanted to write into the Constitution would pass muster unless State-level parties were given their
pound of flesh. The amendments were allowed only after it was agreed that the powers of panchayats could be listed in the Constitution. Illustratively, they would be defined and endowed on PRIs by the State Legislature acting at its discretion.

This left the door wide open for the States to exert the power of the new political fact that while the Union and State Governments could afford to ignore panchayats as long as the MLAs were happy, the Union Government had to be sensitive to the demands of State-level parties. This has given State-level actors strong beachheads on the shores of both inter-State and intra-State federalism. By using various administrative devices and non-elected parallel structures, State Governments have subordinated their PRIs to the State administration and given the upper hand to State Government officials against the elected heads of PRIs. Panchayats have become local agencies for implementing schemes drawn up in distant State capitals. And their own volition has been further circumscribed by a plethora of "Centrally-sponsored schemes". These are drawn up by even more distant Central authorities but at the same time tie up local staff and resources on pain of the schemes being switched off in the absence of matching local contribution. The "foreign aid" syndrome can be clearly seen at work behind this kind of "grass roots development".

36. What is the "dilemma" at the intra-State level mentioned in the first paragraph of the passage?
   1. Should the state governments wrest more space from the Union, before considering the panchayati system?
   2. Should rights similar to those that the States managed to get be extended to panchayats as well?
   3. Should the single party system which has withered away be brought back at the level of the States?
   4. Should the States get "their pound of flesh" before allowing the Union government to pass any more laws?

37. Which of the following most closely describes the 'fatal flaw' that the passage refers to?
   1. The ways in which the democratic multi-party system works in an assertively pluralistic society like India's are flawed.
   2. The mechanisms that our federal system uses at the Union government level to deal with States are imperfect.
   3. The instruments that have ensured federalism at one level have been used to achieve the opposite at another.
   4. The Indian Constitution and the spirit of the Indian polity are fatally flawed.

38. Which of the following best captures the current state of Indian federalism as described in the passage?
   1. The Supreme Court has not begun to extend the limits of its power.
   2. The multi-party system has replaced the single party system.
   3. The Union, state and panchayati raj levels have become real.
   4. There is real distribution of power between the Union and State level parties.

39. The central theme of the passage can be best summarized as:
   1. Our grassroots development at the panchayat level is now driven by the "foreign aid" syndrome.
   2. Panchayati Raj is firmly entrenched at the lower level of our federal system of governance.
   3. A truly federal polity has not developed since PRIs have not been allowed the necessary political space.
   4. The Union government and State-level parties are engaged in a struggle for the protection of their respective rights.
40. The sentence in the last paragraph, "And their own volition has been further circumscribed...", refers to:

1. The weakening of the local institutions' ability to plan according to their needs.
2. The increasing demands made on elected local leaders to match central grants with local contributions.
3. The empowering of the panchayat system as implementers of schemes from State capitals.
4. The process by which the prescribed Central schemes are reformulated by local elected leaders.

PASSAGE IV

The endless struggle between the flesh and the spirit found an end in Greek art. The Greek artists were unaware of it. They were spiritual materialists, never denying the importance of the body and ever seeing in the body a spiritual significance. Mysticism on the whole was alien to the Greeks, thinkers as they were. Thought and mysticism never go well together and there is little symbolism in Greek art. Athena was not a symbol of wisdom but an embodiment of it and her statues were beautiful grave women, whose seriousness might mark them as wise, but who were marked in no other way. The Apollo Belvedere is not a symbol of the sun, nor the Versailles Artemis of the moon. There could be nothing less akin to the ways of symbolism than their beautiful, normal humanity. Nor did decoration really interest the Greeks. In all their art they were preoccupied with what they wanted to express, not with ways of expressing it, and lovely expression, merely as lovely expression, did not appeal to them at all.

Greek art is intellectual art, the art of men who were clear and lucid thinkers, and it is therefore plain art. Artists than whom the world has never seen greater, men endowed with the spirit's best gift, found their natural method of expression in the simplicity and clarity which are the endowment of the unclouded reason. "Nothing in excess," the Greek axiom of art, is the dictum of men who would brush aside all obscuring, entangling superfluity, and see clearly, plainly, unadorned, what they wished to express. Structure belongs in an especial degree to the province of the mind in art, and architectonics were pre-eminently a mark of the Greek. The power that made a unified whole of the trilogy of a Greek tragedy, that envisioned the sure, precise, decisive scheme of the Greek statue, found its most conspicuous expression in Greek architecture. The Greek temple is the creation, par excellence, of mind and spirit in equilibrium.

A Hindoo temple is a conglomeration of adornment. The lines of the building are completely hidden by the decorations. Sculptured figures and ornaments crowd its surface, stand out from it in thick masses, break it up into a bewildering series of irregular tiers. It is not a unity but a collection, rich, confused. It looks like something not planned but built this way and that as the ornament required. The conviction underlying it can be perceived: each bit of the exquisitely wrought detail had a mystical meaning and the temple's exterior was important only as a means for the artist to inscribe thereon the symbols of the truth. It is decoration, not architecture.

Again, the gigantic temples of Egypt, those massive immensities of granite which look as if only the power that moves in the earthquake were mighty enough to bring them into existence, are something other than the creation of geometry balanced by beauty. The science and the spirit are there, but what is there most of all is force, unhuman force, calm but tremendous, overwhelming. It reduces to nothingness all that belongs to man. He is annihilated. The Egyptian architects were possessed by the consciousness of the awful, irresistible domination of the ways of nature; they had no thought to give to the insignificant atom that was man. Greek architecture of the great age is the expression of men who were, first of all, intellectual artists, kept firmly within the visible world by their mind, but, only second to that, lovers of the human world. The Greek temple is the perfect expression of the pure intellect illumined by the spirit. No other great buildings anywhere approach its simplicity. In the Parthenon straight columns rise to plain capitals; a pediment is sculptured in bold relief; there is nothing more. And yet here is the Greek miracle-this absolute simplicity of structure is alone in majesty of beauty among all the temples and cathedrals and palaces of the world. Majestic but human, truly Greek. No superhuman force as in Egypt; no strange supernatural shapes as in India; the Parthenon is the home of
humanity at ease, calm, ordered, sure of itself and the world. The Greeks flung a challenge to nature in the fullness of their joyous strength. They set their temples on the summit of a hill overlooking the wide sea, outlined against the circle of the sky. They would build what was more beautiful than hill and sea and sky and greater than all these. It matters not at all if the temple is large or small; one never thinks of the size. It matters not how much it is in ruins. A few white columns dominate the lofty height at Sunion as securely as the great mass of the Parthenon dominates all the sweep of sea and land around Athens. To the Greek architect man was the master of the world. His mind could understand its laws; his spirit could discover its beauty.

41. Which of the following is NOT a characteristic of Greek architecture, according to the passage?

1. A lack of excess.  2. Simplicity of form.  

42. From the passage, which of the following combinations can be inferred to be correct?

43. According to the passage, what conception of man can be inferred from Egyptian architecture?

1. Man is the centre of creation.  2. Egyptian temples save man from unhuman forces.  
3. Temples celebrate man's victory over nature.  4. Man is inconsequential before the tremendous force of nature.  

44. According to the passage, which of the following best explains why there is little symbolism in Greek art?

1. The Greeks focused on thought rather than mysticism.  
2. The struggle between the flesh and the spirit found an end in Greek art.  
3. Greek artists were spiritual materialists.  
4. Greek statues were embodiments rather than symbols of qualities.  

45. "The Greeks flung a challenge to nature in the fullness of their joyous strength." Which of the following captures the 'challenge' that is being referred to?

1. To build a monument matching the background colours of the sky and the sea.  
2. To build a monument bigger than nature's creations.  
3. To build monuments that were more appealing to the mind and spirit than nature's creations.  
4. To build a small but architecturally perfect monument.  

PASSAGE V

The invention of the gas turbine by Frank Whittle in England and Hans von Ohain in Germany in 1939 signalled the beginning of jet transport. Although the French engineer Lorin had visualized the concept of jet propulsion more than 25 years earlier, it took improved materials and the genius of Whittle and von Ohain to recognize the advantages that a gas turbine offered over a piston engine, including speeds in excess of 350 miles per hour. The progress from the first flights of liquid propellant rocket and jet-propelled aircraft in 1939 to the first faster-than-sound (supersonic) manned airplane (the Bell X-I) in 1947 happened in less than a decade. This then led very rapidly to a series of supersonic fighters and bombers, the first of which became operational in the 1950s. World War II technology foundations and emerging Cold War imperatives then led us into space with the launch of Sputnik in 1957 and the placing of the first man on the moon only 12 years later—a mere 24 years after the end World War II.
Now, a hypersonic flight can take you anywhere in the planet in less than four hours. British Royal Air Force Royal and Royal Navy, and the air forces of several other countries are going to use a single-engine cousin to the F/A-22 called the F-35 Joint Strike Fighter. These planes exhibit stealthy angles and coatings that make it difficult radar to detect them, among aviation's most cutting-edge advances in design. The V-22, known as tilt-rotor, part helicopter, part airplane, takes off vertically, then tilts its engine forward for winged flight. It provides speed, three times the payload, five times the range of the helicopters it's meant to replace. The new fighter, F/A-22 Raptor, with more than a million parts, shows a perfect amalgamation of stealth, speed, avionics and agility.

It seems conventional forms, like the Predator and Global Hawk are passe, the stealthier unmanned aerial vehicles (UAVs) are in. They are shaped like kites, bats and boomerang, all but invisible to the enemy radar and able remain over hostile territory without any fear of getting grilled if shot down. Will the UAVs take away pilots' jobs permanently? Can a computer-operated machine take a smarter and faster decision in a war-like situation? The new free-flight concept will probably supplement the existing air traffic control system by computers on each plane to map the altitude, route, weather and other planes; and a decade from now, there will be no use of radar any more.

How much bigger can the airplanes get? In the '50s they got speed, in the '80s they became stealthy. Now, they are getting smarter thanks to computer automation. The change is quite huge: from the four-seater to the A380 airplane. It seems we are now trading speed for size as we build a new superjumbo jet, the 555 seater A380, which will fly at almost the same speed of the Boeing 707, introduced half a century ago, but with an improved capacity, range, greater fuel economy. A few years down the line will come the truly larger model, to be known as 747X. In the beginning of 2005, the A380, the world's first fully double-decked superjumbo passenger jet, weighing 1.2 million pounds, may carry a load of about 840 passengers.

Barring the early phase, civil aviation has always lagged behind the military technologies (of jet engines, lightweight composite materials etc.). There are two fundamental factors behind the decline in commercial aeronautics in comparison to military aeronautics. There is no collective vision of our future such as the one that drove us in the past. There is also a need for a more aggressive pool of airplane design talents to maintain an industry that continues to find a multibillion dollar-a-year market for its product.

Can the history of aviation technology tell us something about the future of aeronautics? Have we reached a final state in our evolution to a mature technology in aeronautics? Are the challenges of coming out with the 'better, cheaper, faster' designs somehow inferior to those that are suited for 'faster, higher, further'? Safety should improve greatly as a result of the forthcoming improvements in airframes, engines, and avionics. Sixty years from now, aircraft will recover on their own if the pilot loses control. Satellites are the key not only to GPS (global positioning system) navigation but also to in-flight communications, uplinked weather, and even in-flight e-mail. Although there is some debate about what type of engines will power future airplanes—lightweight turbines, turbocharged diesels, or both—there is little debate about how these power plants will be controlled. Pilots of the future can look forward to more and better on-board safety equipment.

46. Why might radars not be used a decade from now?

1. Stealth technology will advance so much that it is pointless to use radar to detect aircraft.
2. UA Vs can remain over hostile territory without any danger of being detected.
3. Computers on board may enable aircraft to manage safe navigation on their own.
4. It is not feasible to increase the range of radars.
47. According to the author, commercial aeronautics, in contrast to military aeronautics, has declined because, among other things,

1. Speed and technology barriers are more easily overcome in military aeronautics.
2. The collective vision of the past continues to drive civil and commercial aeronautics.
3. Though the industry has a huge market, it has not attracted the right kind of aircraft designers.
4. There is a shortage of materials, like light weight composites, used in commercial aeronautics.

48. What is the most noteworthy difference between V-22 and a standard airplane?

1. It can take off vertically.  
2. It has winged flight.  
3. It has excellent payload.  
4. Its range is very high.

49. What is the fourth paragraph of the passage, starting, "How much bigger....", about?

1. Stealth, speed, avionics, and agility of new aircraft.  
2. The way aircraft size has been growing.  
3. Use of computer automation in aircraft.  
4. Super-jumbo jets that can take more than 500 passengers.

50. According to the first paragraph of the passage, which of the following statements is NOT false?

1. Frank Whittle and Hans von Ohain were the first to conceive of jet propulsion. 
2. Supersonic fighter planes were first used in the Second World War. 
3. No man had traveled faster than sound until the 1950s. 
4. The exploitation of jet propulsion for supersonic aviation has been remarkably fast.
SECTION II

Number of Questions: 50

51. If three positive real numbers \(x, y, z\) satisfy \(y - x = z - y\) and \(xyz = 4\), then what is the minimum possible value of \(y^\frac{1}{3}\)?
   1. \(2^{\frac{1}{3}}\)  
   2. \(2^{\frac{2}{3}}\)  
   3. \(2^{\frac{1}{4}}\)  
   4. \(2^{\frac{3}{4}}\)

52. An intelligence agency forms a code of two distinct digits selected from 0, 1, 2…, 9, such that the first digit of the code is nonzero. The code, handwritten on a slip, can however potentially create confusion when read upside down – for example; the code 91 may appear as 16. How many codes are there for which no such confusion can arise?
   1. 80  
   2. 78  
   3. 71  
   4. 69

53. Consider two different cloth-cutting processes. In the first one, \(n\) circular cloth pieces are cut from a square cloth piece of side \(a\) in the following steps: the original square of side \(a\) is divided into \(n\) smaller squares, not necessarily of the same size; then a circle of maximum possible area is cut from each of the smaller squares. In the second process, only one circle of maximum possible area is cut from the square of side \(a\) and the process ends there. The cloth pieces remaining after cutting the circles are scrapped in both the processes. The ratio of the total area of scrap cloth generated in the former to that in the latter is:
   1. 1: 1  
   2. \(\sqrt{2} : 1\)  
   3. \(\frac{n(4 - \pi)}{4n - \pi}\)  
   4. \(\frac{4n - \pi}{\pi(4 - \pi)}\)

54. In the figure below (not drawn to scale), rectangle ABCD is inscribed in the circle with center at O. The length of side AB is greater than that of side BC. The ratio of the area of the circle to the area of the rectangle ABCD is \(\pi : \sqrt{3}\). The line segment DE intersects AB at E such that \(\angle ODC = \angle ADE\). What is the ratio \(AE : AD\)?

   1. \(\sqrt{3}\)  
   2. \(\sqrt{2}\)  
   3. \(2\sqrt{3}\)  
   4. \(1 : 2\)

55. There are 12 towns grouped into four zones with three towns per zone. It is intended to connect the towns with telephone lines such that every two towns are connected with three direct lines if they belong to the same zone, and with only one direct line otherwise. How many direct telephone lines are required?
   1. 72  
   2. 90  
   3. 96  
   4. 144

56. In the figure (not drawn to scale) given below, P is a point on AB such that AP: PB = 4:3. PQ is parallel to AC and QD is parallel to CP. In \(\triangle ARC\), \(\angle ARC = 90^\circ\), and in \(\triangle PQS\), \(\angle PSQ = 90^\circ\). The length of QS is 6 cms. What is ratio AP: PD?
   1. 10:3  
   2. 2:1  
   3. 7:3  
   4. 8:3
57. A car is being driven, in a straight line and at a uniform speed, towards the base of a vertical tower. The top of the tower is observed from the car process, it takes 10 minutes for the angle of elevation to change from $45^\circ$ to $60^\circ$. After how much more time will this car reach the base of the tower?

1. $5 (\sqrt{3} + 1)$  
2. $6 (\sqrt{3} + \sqrt{2})$  
3. $7 (\sqrt{3} - 1)$  
4. $8 (\sqrt{3} - 2)$

58. In the figure (not drawn to scale) given below, if $AD = CD = BC$, and $\angle BCE = 96^\circ$, how much is $\angle DBC$?

1. $32^\circ$  
2. $84^\circ$  
3. $64^\circ$  
4. Cannot be determined

59. If both $a$ and $b$ belong to the set $\{1, 2, 3, 4\}$, then the number of equations of the form $a x^2 + b x + 1 = 0$ having real roots is -

1. 10  
2. 7  
3. 6  
4. 12

60. If $\log_{10} x - \log_{10} \sqrt{x} = 2 \log_{10} 10$, then a possible value of $x$ is given by:

1. 10  
2. 1/100  
3. 1/1000  
4. None of these

61. What is the sum of all two-digit numbers that give a remainder of 3 when they are divided by 7?

1. 666  
2. 676  
3. 683  
4. 777

62. In the figure below (not drawn to scale), A, B and C are three points on a circle with center O. The chord BA is extended to a point T such that CT becomes a tangent to the circle at point C. If $\angle ATC = 30^\circ$ and $\angle ACT = 50^\circ$, then the angle $\angle BOA$ is:

1. $100^\circ$  
2. $150^\circ$  
3. $80^\circ$  
4. not possible to determine

63. What is the sum of $n$ terms in the series: $\log m + \log (m^2/n) + \log (m^3/n^2) + \log (m^4/n^3) + \ldots$

1. $\log \left[ m^{(n-1)}/ n^{(n+1)/2} \right]$  
2. $\log \left[ m^n / n^{n+1/2} \right]$  
3. $\log \left[ m^{(1-n)}/ n^{(1-m)/2} \right]$  
4. $\log \left[ m^{(n+1)}/ n^{(n-1)/2} \right]$
64. Let $S_1$ be a square of side $a$. Another square $S_2$ is formed by joining the mid-points of the sides of $S_1$. The same process is applied to $S_2$ to form yet another square $S_3$, and so on. If $A_1, A_2, A_3, \ldots$ be the areas and $P_1, P_2, P_3, \ldots$ be the perimeters of $S_1, S_2, S_3, \ldots$, respectively, then the ratio $\frac{P_1 + P_2 + P_3 + \ldots}{A_1 + A_2 + A_3 + \ldots}$ equals:

1. $2(1 + \sqrt{2}) / a$
2. $2(2 - \sqrt{2}) / a$
3. $2(2 + \sqrt{2}) / a$
4. $2(1 + 2\sqrt{2}) / a$

65. The infinite sum $1 + \frac{4}{7} + \frac{9}{7^2} + \frac{16}{7^3} + \frac{25}{7^4} + \ldots$ equals:

1. $\frac{27}{14}$
2. $\frac{21}{13}$
3. $\frac{49}{27}$
4. $\frac{256}{147}$

66. Consider the sets $T_n = \{n, n + 1, n + 2, n + 3, n + 4\}$, where $n = 1, 2, 3, \ldots, 96$. How many of these sets contain 6 or any integral multiple thereof (i.e., any one of the numbers 6, 12, 18, \ldots)?

1. 80
2. 81
3. 82
4. 83

67. Let ABCDEF be a regular hexagon. What is the ratio of the area of the triangle ACE to that of the hexagon ABCDEF?

1. $\frac{1}{3}$
2. $\frac{1}{2}$
3. $\frac{2}{3}$
4. $\frac{5}{6}$

68. The number of roots common between the two equations $x^3 + 3x^2 + 4x + 5 = 0$ and $x^3 + 2x^2 + 7x + 3 = 0$ is:

1. 0
2. 1
3. 2
4. 3

69. A real number $x$ satisfying $1 - \frac{1}{n} < x \leq 3 + \frac{1}{n}$, for every positive integer $n$, is best described by:

1. $1 < x < 4$
2. $1 < x \leq 3$
3. $0 < x \leq 4$
4. $1 \leq x \leq 3$

**DIRECTIONS for questions 70 to 72:** Answer the questions on the basis of the information given below.

The seven basic symbols in a certain numberal system and their respective values are as follows:

$I = 1, \ V = 5, \ X = 10, \ L = 50, \ C = 100, \ D = 500, \ \text{and} \ M = 1000$

In general, the symbols in the numeral system are read from left to right, starting with the symbol representing the largest value; the same symbol cannot occur contiguously more than three times; the value of the numeral is the sum of the values of the symbols. For eg., XXVII = 10 + 10 + 5 + 1 + 1 = 27.

An exception to the left–to–right reading occurs when a symbol is followed immediately by a symbol of greater value; then, the smaller value is substracted from the larger. For example, XLVI = (50 – 10) + 5 + 1 = 46.

70. The value of the numeral MDCCLXXXVII is:

1. 1687
2. 1787
3. 1887
4. 1987
71. The value of the numeral MCMXCIX is:

72. Which of the following can represent the numeral for 1995?
   a. MCMLXXV   b. MCMXCV   c. MVD   d. MVM
   1. only (a) and (b)   2. only (c) and (d)   3. only (b) and (d)   4. only (d)

**DIRECTIONS for questions 73 to 75:** Answer the questions on the basis of the tables given below.
Two binary operations $\oplus$ and $*$ are defined over the set \{a, e, f, g, h\} as per the following tables:

<table>
<thead>
<tr>
<th>$\oplus$</th>
<th>a</th>
<th>e</th>
<th>f</th>
<th>g</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>a</td>
<td>e</td>
<td>f</td>
<td>g</td>
<td>h</td>
</tr>
<tr>
<td>e</td>
<td>e</td>
<td>f</td>
<td>g</td>
<td>h</td>
<td>a</td>
</tr>
<tr>
<td>f</td>
<td>f</td>
<td>g</td>
<td>h</td>
<td>a</td>
<td>e</td>
</tr>
<tr>
<td>g</td>
<td>g</td>
<td>h</td>
<td>a</td>
<td>e</td>
<td>f</td>
</tr>
<tr>
<td>h</td>
<td>h</td>
<td>a</td>
<td>e</td>
<td>f</td>
<td>g</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>$*$</th>
<th>a</th>
<th>e</th>
<th>f</th>
<th>g</th>
<th>h</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>a</td>
<td>a</td>
<td>a</td>
<td>a</td>
<td>a</td>
</tr>
<tr>
<td>f</td>
<td>f</td>
<td>g</td>
<td>h</td>
<td>a</td>
<td>e</td>
</tr>
<tr>
<td>g</td>
<td>g</td>
<td>a</td>
<td>g</td>
<td>e</td>
<td>h</td>
</tr>
<tr>
<td>h</td>
<td>h</td>
<td>a</td>
<td>h</td>
<td>g</td>
<td>f</td>
</tr>
</tbody>
</table>

Thus, according to the first table \(f \oplus g = a\), while according to the second table \(g \ast h = f\), and so on. Also, let \(f^2 = f \ast f\), \(g^3 = g \ast g \ast g\), and so on.

73. What is the smallest positive integer \(n\) such that \(g^n = e\)?
   1. 4   2. 5   3. 2   4. 3

74. Upon simplification, \(f \oplus [f \ast (f \oplus f)]\) equals:
   1. e   2. f   3. g   4. h

75. Upon simplification, \(\{a^{10} \ast (f^{10} \oplus g^9)\} \oplus e^8\) equals:
   1. e   2. f   3. g   4. h

**DIRECTIONS for questions 76 to 78:** Answer the questions on the basis of the information given below.

Consider three circular parks of equal size with centers at \(A_1\), \(A_2\) and \(A_3\) respectively. The parks touch each other at the edge as shown in the figure (not drawn to scale). There are three paths formed by the triangles \(A_1A_2A_3\), \(B_1B_2B_3\) and \(C_1C_2C_3\), as shown. Three sprinters A, B and C begin running from points \(A_1\), \(B_1\) and \(C_1\) respectively. Each sprinter traverses her triangular path clockwise and returns to her starting point.

![Diagram of three circular parks and paths]
76. Let the radius of each circular park be \( r \), and the distances to be traversed by the sprinters A, B and C be \( a \), \( b \) and \( c \), respectively. Which of the following is true?

1. \( b - a = c - b = 3 \sqrt{3} \ r \)
2. \( b - a = c - b = \sqrt{3} \ r \)
3. \( b = \frac{a + c}{2} = 2 (1 + \sqrt{3}) r \)
4. \( c = 2b - a = (2 + \sqrt{3}) r \)

77. Sprinter A traverses distances \( A_1A_2, A_2A_3 \) and \( A_3A_1 \) at average speeds of 20, 30 and 15, respectively. B traverses her entire path at a uniform speed of \((10 \sqrt{3} + 20)\). C traverses distances \( C_1C_2, C_2C_3 \) and \( C_3C_1 \) at average speeds of \( \frac{40}{3} (\sqrt{3} + 1), \frac{40}{3} (\sqrt{3} + 1) \), and 120, respectively. All speeds are in the same unit. Where would B and C be respectively when A finishes her sprint?

1. \( B_1, C_1 \)
2. \( B_3, C_3 \)
3. \( B_1, C_3 \)
4. \( B_1, \) Somewhere between \( C_3 \) and \( C_1 \)

78. Sprinters A, B and C traverse their respective paths at uniform speeds of \( u, v \) and \( w \) respectively. It is known that \( u^2 : v^2 : w^2 \) is equal to Area A: Area B: Area C, where Area A, Area B and Area C are the areas of triangles \( A_1A_2A_3, B_1B_2B_3, \) and \( C_1C_2C_3 \), respectively. Where would A and C be when B reaches point \( B_3 \)?

1. \( A_2, C_3 \)
2. \( A_3, C_3 \)
3. \( A_3, C_2 \)
4. Somewhere between \( A_2 \) and \( A_3 \)

DIRECTIONS for questions 79 to 81: Answer the questions on the basis of the information given below. Consider a cylinder of height \( h \) cms and radius \( \frac{2}{\pi} \) cms as shown in the figure (not drawn to scale). A string of a certain length, when wound on its cylindrical surface, starting at point A and ending at point B, gives a maximum of \( n \) turns (in other words, the string’s length is the minimum length required to wind \( n \) turns).

79. What is the vertical spacing in cms between two consecutive turns?

1. \( \frac{h}{n} \)
2. \( \frac{h}{\sqrt{n}} \)
3. \( \frac{h}{n^2} \)
4. cannot be determined with given information

80. The same string, when wound on the exterior four walls of a cube of side \( n \) cms, starting at point C and ending at point D, can give exactly one turn (see figure, not drawn to scale). The length of the string, in cms, is

1. \( \sqrt{2} \ n \)
2. \( \sqrt{17} \ n \)
3. \( n \)
4. \( \sqrt{13} \ n \)

81. In the setup of the previous two questions, how is \( h \) related to \( n \)?

1. \( h = \sqrt{2} \ n \)
2. \( h = \sqrt{17} \ n \)
3. \( h = n \)
4. \( h = \sqrt{13} \ n \)
DIRECTIONS for questions 82 and 83: Answer the questions independently of each other.

82. Let x and y be positive integers such that x is prime and y is composite. Then,

1. \( y - x \) cannot be an even integer
2. \( xy \) cannot be an even integer.
3. \( (x + y) / x \) cannot be an even integer
4. None of the above statements is true.

83. A survey on a sample of 25 new cars being sold at a local auto dealer was conducted to see which of the three popular options — air conditioning, radio and power windows — were already installed. The survey found:
- 15 had air conditioning,
- 2 had air conditioning and power windows but no radios,
- 12 had radio,
- 6 had air conditioning and radio but no power windows,
- 11 had power windows,
- 4 had radio and power windows,
- 3 had all three options.

What is the number of cars that had none of the options?

1. 4
2. 3
3. 1
4. 2

DIRECTIONS for question 84 and 85: Answer the questions on the basis of information given below.

A string of three English letters is formed as per the following rules:

a) The first letter is any vowel.
b) The second letter is m, n or p.
c) If the second letter is m then the third letter is any vowel which is different from the first letter.
d) If the second letter is n then the third letter is e or u.
e) If the second letter is p then the third letter is the same as the first letter.

84. How many strings of letters can possibly be formed using the above rules?

1. 40
2. 45
3. 30
4. 35

85. How many strings of letters can possibly be formed using the above rules such that the third letter of the string is e?

1. 8
2. 9
3. 10
4. 11

DIRECTIONS for question 86 and 100: Answer the questions independently of each other.

86. If \( n \) is such that \( 36 \leq n \leq 72 \), then \( x = \frac{n^2 + 2\sqrt{n} + 16}{n + 4\sqrt{n} + 4} \) satisfies:

1. \( 20 < x < 54 \)
2. \( 23 < x < 58 \)
3. \( 25 < x < 64 \)
4. \( 28 < x < 60 \)

87. If \( 13x + 1 < 2z \), and \( z + 3 = 5y^2 \), then:

1. x is necessarily less than y
2. x is necessarily greater than y
3. x is necessarily equal to y
4. None of the above is necessarily true

88. Let \( n(>1) \) be a composite integer such that \( \sqrt{n} \) is not an integer. Consider the following statements:

A: \( n \) has a perfect integer-valued divisor which is greater than 1 and less than \( \sqrt{n} \)
B: \( n \) has a perfect integer-valued divisor which is greater than \( \sqrt{n} \) but less than \( n \)

Then,

1. Both A and B are false
2. A is true but B is false
3. A is false but B is true
4. Both A and B are true
89. If $|b| \geq 1$ and $x = -|a|b$, then which one of the following is necessarily true?

1. $a - xb < 0$  
2. $a - xb \geq 0$  
3. $a - xb > 0$  
4. $a - xb \leq 0$

90. A piece of paper is in the shape of a right angled triangle and is cut along a line that is parallel to the hypotenuse, leaving a smaller triangle. There was a 35% reduction in the length of the hypotenuse of the triangle. If the area of the original triangle was 34 square inches before the cut, what is the area (in square inches) of the smaller triangle?

1. 16.665  
2. 16.565  
3. 15.465  
4. 14.365

91. In a coastal village, every year floods destroy exactly half of the huts. After the flood water recedes, twice the number of huts destroyed are rebuilt. The floods occurred consecutively in the last three years namely 2001, 2002 and 2003. If floods are again expected in 2004, the number of huts expected to be destroyed is:

1. Less than the number of huts existing at the beginning of 2001.  
2. Less than the total number of huts destroyed by floods in 2001 and 2003.  
3. Less than the total number of huts destroyed by floods in 2002 and 2003.  
4. More than the total number of huts built in 2001 and 2002.

92. Let $a$, $b$, $c$, $d$, and $e$ be integers such that $a = 6b = 12c$, and $2b = 9d = 12e$. Then which of the following pairs contains a number that is not an integer?

1. $\left( \frac{a}{27}, \frac{b}{e} \right)$  
2. $\left( \frac{a}{36}, \frac{c}{e} \right)$  
3. $\left( \frac{a}{12}, \frac{bd}{18} \right)$  
4. $\left( \frac{a}{6}, \frac{c}{d} \right)$

93. If $a$, $a + 2$, and $a + 4$ are prime numbers, then the number of possible solutions for $a$ is:

1. one  
2. two  
3. three  
4. more than three

94. A square tin sheet of side 12 inches is converted into a box with open top in the following steps: The sheet is placed horizontally. Then, equal sized squares, each of side $x$ inches, are cut from the four corners of the sheet. Finally, the four resulting sides are bent vertically upwards in the shape of a box. If $x$ is an integer, then what value of $x$ maximizes the volume of the box?

1. 3  
2. 4  
3. 1  
4. 2

95. Two straight rods R1 and R2 diverge from a point A at an angle of $120^\circ$. Ram starts walking from point A along R1 at a uniform speed of 3 km/hr. Shyam starts walking at the same time from A along R2 at a uniform speed of 2 km/h. They continue walking for 4 hours along their respective roads and reach points B and C on R1 and R2, respectively. There is a straight line path connecting B and C. Then Ram returns to point A after walking along the line segments BC and CA. Shyam also returns to A after walking along line segments CB and BA. Their speeds remain unchanged. The time interval (in hours) between Ram’s and Shyam’s return to the point A is:

1. $\frac{10\sqrt{19} + 26}{3}$  
2. $\frac{2\sqrt{19} + 10}{3}$  
3. $\frac{\sqrt{19} + 26}{3}$  
4. $\frac{\sqrt{19} + 10}{3}$

96. What is the remainder when $4^{36}$ is divided by 6?

1. 0  
2. 2  
3. 3  
4. 4

97. If $x$ and $y$ are integers then the equation $5x + 19y = 64$ has:

1. no solution for $x < 300$ and $y < 0$  
2. no solution for $x > 250$ and $y > -100$  
3. a solution for $250 < x < 300$  
4. a solution for $-59 < y < -56$
98. If \( \frac{1}{3} \log_3 M + 3 \log_3 N = 1 + 10^{0.008} \cdot 5 \), then:

1. \( M^9 = \frac{9}{N} \)
2. \( N^9 = \frac{9}{M} \)
3. \( M^3 = \frac{3}{N} \)
4. \( N^9 = \frac{3}{M} \)

99. Using only 2, 5, 10, 25 and 50 paise coins, what will be the minimum number of coins required to pay exactly 78 paise, 69 paise, and Re. 1.01 to three different persons?

1. 19   2. 20   3. 17   4. 18

100. The length of the circumference of a circle equals the perimeter of a triangle of equal sides, and also the perimeter of a square. The area covered by the circle, triangle, and square are \( c \), \( t \), and \( s \), respectively. Then,
SECTION III 
Number of Questions: 50 

DIRECTIONS for Questions 101 to 104: Answer the questions on the basis of the following information.

Four families decided to attend the marriage ceremony of one of their colleagues. One family has no kids, while the others have at least one kid each. Each family with kids has at least one kid attending the marriage. Given below is some information about the families, and who reached when to attend the marriage.

The family with 2 kids came just before the family with no kids.
Shanthi who does not have any kids reached just before Sridevi's family.
Sunil and his wife reached last with their only kid.
Anil is not the husband of Joya.
Anil and Raj are fathers.
Sridevi's and Anita's daughters go to the same school.
Joya came before Shanthi and met Anita when she reached the venue.
Raman stays the farthest from the venue.
Raj said his son could not come because of his exams.

101. Which woman arrived third?

102. Name the correct pair of husband and wife?
   1. Raj and Shanthi.  2. Sunil and Sridevi.  3. Anil and Sridevi.  4. Raj and Anita.

103. Of the following pairs, whose daughters go to the same school?
   1. Anil and Raman.  2. Sunil and Raman.  3. Sunil and Anil.  4. Raj and Anil.

104. Whose family is known to have more than one kid for certain?
   1. Raman's.  2. Raj's.  3. Anil's.  4. Sunil's.

DIRECTIONS for Questions 105 to 108: Answer the questions on the basis of the following information.

The plan above shows an office block for six officers, A, B, C, D, E, and F. Both B and C occupy offices to the right of the corridor (as one enters the office block) and A occupies an office to the left of the corridor. E and F occupy offices on opposite sides of the corridor but their offices do not face each other. The offices of C and D face each other. E does not have a corner office. F's office is further down the corridor than A's, but on the same side.

105. If E sits in his office and faces the corridor, whose office is to his left?
106. Whose office faces A's office?

1. B  
2. C  
3. D  
4. E

107. Who is/are F's neighbour(s)?

1. A only  
2. A and D  
3. C only  
4. Band C

108. D was heard telling someone to go further down the corridor to the last office on the right. To whose room was he trying to direct that person?

1. A  
2. B  
3. C  
4. F

**DIRECTIONS for Questions 109 to 112:** Answer the questions on the basis of the following information.

Seven faculty members at a management institute frequently visit a lounge for strong coffee and stimulating conversation. On being asked about their visit to the lounge last Friday we got the following responses.

JC: I came in first, and the next two persons to enter were SS and SM. When I left the lounge, JP and VR were present in the lounge. DG left with me.

JP: When I entered the lounge with VR, JC was sitting there. There was someone else, but I cannot remember who it was.

SM: I went to the lounge for a short while, and met JC, SS, and DG in the lounge that day.

SS: I left immediately after SM left.

DG: I met JC, SS, SM, JP, and VR during my first visit to the lounge. I went back to my office with JC. When I went to the lounge the second time, JP and VR were there.

PK: I had some urgent work, so I did not sit in the lounge that day, but just collected my coffee and left. JP and DG were the only people in the lounge while I was there.

VR: No comments.

109. Based on the responses, which of the two, JP or DG, entered the lounge first?

1. JP  
2. DG  
3. Both entered together.  
4. Cannot be deduced.

110. Who was sitting with JC when JP entered the lounge?

1. SS  
2. SM  
3. DG  
4. PK

111. How many of the seven members did VR meet on Friday in the lounge?

1. 2  
2. 3  
3. 4  
4. 5

112. Who were the last two faculty members to leave the lounge?

1. JC and DG  
2. PK and DG  
3. JP and PK  
4. JP and DG

**DIRECTIONS for Questions 113 to 116:** Each question is followed by two statements, A and B. Answer each question using the following instructions:

Choose 1 if the question can be answered by using statement A alone but not by using B alone.

Choose 2 if the question can be answered by using statement B alone but not by using A alone.

Choose 3 if the question can be answered by using either statement alone.

Choose 4 if the question can be answered by using both the statements together but not by either
statement alone.

113. In a cricket match, the 'man of the match' award is given to the player scoring the highest number of runs. In case of a tie, the player (out of those locked in the tie) who has taken the higher number of catches is chosen. Even thereafter if there is a tie, the player (out of those locked in the tie) who has dropped fewer catches is selected. Aakash, Biplab, and Chirag who were contenders for the award dropped at least one catch each. Biplab dropped 2 catches more than Aakash did, scored 50, and took 2 catches. Chirag got two chances to catch and dropped both. Who was the 'man of the match'?  
A. Chirag made 15 runs less than both Aakash and Biplab.  
B. The catches dropped by Biplab are 1 more than the catches taken by Aakash.

114. Four friends, A, B, C, and D got the top four ranks in a competitive examination, but A did not get the first, B did not get the second, C did not get the third, and D did not get the fourth rank. Who secured which rank?  
A. Neither A nor D were among the first 2.  
B. Neither B nor C was third or fourth.

115. The members of a local club contributed equally to pay Rs. 600 towards a donation. How much did each one pay?  
A. If there had been five fewer members, each one would have paid an additional Rs. 10.  
B. There were at least 20 members in the club, and each one paid no more than Rs. 30.

116. A family has only one kid. The father says "after 'n' years, my age will be 4 times the age of my kid." The mother says "after 'n' years, my age will be 3 times that of my kid." What will be the combined ages of the parents after 'n' years?  
A. The age difference between the parents is 10 years.  
B. After 'n' years the kid is going to be twice as old as she is now.

DIRECTIONS for Questions 117 to 121: Answer the questions on the basis of the following information.

Recently, the answers of a test held nationwide were leaked to a group of unscrupulous people. The investigative agency has arrested the mastermind and nine other people A, B, C, D, E, F, G, H, and I in this matter. Interrogating them, the following facts have been obtained regarding their operation. Initially the mastermind obtains the correct answer-key. All the others create their answer-keys in the following manner. They obtain the answer key from one or two people who already possess the same. These people are called his/her "sources". If the person has two sources, then he/she compares the answer-keys obtained from both sources. If the key to a question from both sources is identical, it is copied, otherwise it is left blank. If the person has only one source, he/she copies the source's answers into his/her copy. Finally, each person compulsorily replaces one of the answers (not a blank one) with a wrong answer in his/her answer key.

The paper contained 200 questions; so the investigative agency has ruled out the possibility of two or more of them introducing wrong answers to the same question. The investigative agency has a copy of the correct answer key and has tabulated the following data. These data represent question numbers.

<table>
<thead>
<tr>
<th>Name</th>
<th>Wrong Answer(s)</th>
<th>Blank Answer(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>46</td>
<td>--</td>
</tr>
<tr>
<td>B</td>
<td>96, 14, 46</td>
<td>46, 90, 25</td>
</tr>
<tr>
<td>C</td>
<td>27, 56</td>
<td>17, 46, 90</td>
</tr>
<tr>
<td>D</td>
<td>17</td>
<td>--</td>
</tr>
<tr>
<td>E</td>
<td>46</td>
<td>90</td>
</tr>
<tr>
<td>F</td>
<td>25</td>
<td>17</td>
</tr>
<tr>
<td>G</td>
<td>25</td>
<td>92, 90</td>
</tr>
<tr>
<td>H</td>
<td>46</td>
<td>92, 90</td>
</tr>
</tbody>
</table>
117. Which one among the following must have two sources?

118. How many people (excluding the mastermind) needed to make answer-keys before C could make his answer-key?
   1. 2  2. 3  3. 4  4. 5

119. Both G and H were sources to

120. Which of the following statements is true?
   1. C introduced the wrong answer to question 27.
   2. E introduced the wrong answer to question 46.
   3. F introduced the wrong answer to question 14.
   4. H introduced the wrong answer to question 46.

121. Which of the following two groups of people had identical sources?
    (I) A, D, and G  (II) E and H
    1. Only (I)  2. Only (II)  3. Neither (I) nor (II)  4. Both (I) and (II).

DIRECTIONS for Question 122: Answer the question on the basis of the following information.

122. Seventy percent of the employees in a multinational corporation have VCD players, 75 percent have microwave ovens, 80 percent have ACs and 85 percent have washing machines. At least what percentage of employees has all four gadgets?
    1. 15  2. 5  3. 10  4. Cannot be determined.

DIRECTIONS for Questions 123 and 124: Answer the questions on the basis of the following information.
    Shown below is the layout of major streets in a city.

Two days (Thursday and Friday) are left for campaigning before a major election, and the city administration has received requests from five political parties for taking out their processions along the following routes.

Congress: A-C-D-E  BJP: A-B-D-E  SP: A-B-C-E
BSP: B-C-E  CPM: A-C-D
Street B-D cannot be used for a political procession on Thursday due to a religious procession. The district administration has a policy of not allowing more than one procession to pass along the same street on the same day. However, the administration must allow all parties to take out their processions during these two days.

123. Congress procession can be allowed
    1. only on Thursday.  2. only on Friday.
3. on either day. 4. only if the religious procession is cancelled.

124. Which of the following is NOT true?

1. Congress and SP can take out their processions on the same day.
2. The CPM procession cannot be allowed on Thursday.
3. The BJP procession can only take place on Friday.
4. Congress and BSP can take out their processions on the same day.

DIRECTIONS for Questions 125 to 128: Answer the questions on the basis of the following table.
Below is a table that lists countries region-wise. Each region-wise list is sorted, first by birth rate and then alphabetically by name of country. We now wish to merge the region-wise list into one consolidated list and provide overall rankings to each country based first on birth rate and then on death rate. Thus, if some countries have the same birth rate, then the country with a lower death rate will be ranked higher. Further, countries having identical birth and death rates will get the same rank. For example, if two countries are tied for the third position, then both will be given rank 3, while the next country (in the ordered list) will be ranked 5.

<table>

In the consolidated list, what would be the overall rank of the Philippines?

1. 32  
2. 33  
3. 34  
4. 35

In the consolidated list, how many countries would rank below Spain and above Taiwan?

1. 9  
2. 8  
3. 7  
4. 6

In the consolidated list, which country ranks 37th?

1. South Africa  
2. Brazil  
3. Turkey  
4. Venezuela

In the consolidated list, how many countries in Asia will rank lower than every country in South America, but higher than at least one country in Africa?

1. 8  
2. 7  
3. 6  
4. 5

**DIRECTIONS for Questions 129 to 131:** Answer the questions on the basis of the table given below.

**Sex Ratio (Number of females per 1000 males) of Selected States in India: 1901-2001**

Each of the following statements pertains to the number of states with females outnumbering males in a given census year. Which of these statements is NOT correct?

1. The number never exceeded 5 in any census year.
2. This number registered its sharpest decline in the year 1971.
3. The number of consecutive censuses in which this number remained unchanged never exceeded 3.
4. Prior to the 1971 census, this number was never less than 4.

The two states which achieved the largest increases in sex ratio over the period 1901-2001 are

1. Punjab and HP.  
2. HP and Kerala  
3. Assam and J & K  
4. Kerala and J&K.
131. Among the states which have a sex ratio exceeding 1000 in 1901, the sharpest decline over the period 1901-2001 was registered in the state of

DIRECTIONS for Questions 132 and 133: Answer the questions on the basis of the data presented in the figure below.

![Rainfall at Selected Locations in Certain Months](chart1)

132. Which of the following statements is correct?

1. November rainfall exceeds 100 cm. in each location.
2. September rainfall exceeds 50 cm. in each location.
3. March rainfall is lower than September rainfall in each location.
4. None of the above

133. Locations 6 and 7 differ from all the rest because only in these two locations,

1. April rainfall exceeds March rainfall.
2. Peak rainfall occurs in April
3. November rainfall is lower than March rainfall.
4. April rainfall is less than 200 cm.

DIRECTIONS for Questions 134 and 137: Answer the questions on the basis of the following charts.

The profitability of a company is defined as the ratio of its operating profit to its operating income, typically expressed in percentage. The following two charts show the operating income as well as the profitability of six companies in the Financial Years (F.Y.s) 2001-02 and 2002-03.

![Operating Income](chart2)  ![Profitability](chart3)
The operating profits of four of these companies are plotted against their respective operating income figures for the F.Y. 2002-03, in the third chart given below.

134. What is the approximate average operating profit, in F.Y. 2001-2002, of the two companies excluded from the third chart?

1. –7.5 crore  
2. 3.5 crore  
3. 25 crore  
4. Cannot be determined

135. Which company recorded the highest operating profit in F.Y. 2002-03?

1. A  
2. C  
3. E  
4. F

136. Which of the following statements is NOT true?

1. The company with the third lowest profitability in F.Y. 2001–02 has the lowest operating income in F.Y. 2002-03.
2. The company with the highest operating income in the two financial years combined has the lowest operating profit in F.Y. 2002-03.
3. Companies with a higher operating income in F.Y. 2001–02 than in F.Y. 2002-03 have higher profitability in F.Y. 2002-03 than in F.Y. 2001-02.
4. Companies with profitability between 10% and 20% in F.Y. 2001-02 also have operating incomes between 150 crore and 200 crore in F.Y. 2002-03.

137. The average operating profit in F.Y. 2002-03, of companies with profitability exceeding 10% in F.Y. 2002-03, is approximately:

1. 17.5 crore  
2. 25 crore  
3. 27.5 crore  
4. 32.5 crore

DIRECTIONS for Questions 138 and 140: Answer the questions on the basis of the following information.

In a Decathlon, the events are 100m, 400m, 100m hurdles, 1500m, High jump, Pole-vault, Long jump, Discus, Shot Put and Javelin. The performance in the first four of these events is consolidated into Score-1, the next three into Score-2, and the last three into Score-3. Each such consolidation is obtained by giving appropriate positive weights to individual events. The final score is simply the total of these three scores. The athletes with the highest, second highest and the third highest final scores receive the gold, silver and bronze medals, respectively. The table below gives the scores and performances of nineteen top athletes in this event.
### Decathlon Scores

138. The athletes from FRG and USA decided to run a 4 x 100m relay race for their respective countries with the country having three athletes borrowing the athlete from CZE. Assume that all the athletes ran their stretch of the relay race at the same speed as in Decathlon event. How much more time did the FRG relay team take as compared to the USA team?

1. 0.18   2. 0.28   3. 0.78   4. 0.00

139. What is the least that Deley Thomson must get in Score-2 that ensures him a bronze medal?

1. 5309   2. 5296   3. 5271   4. 5270

140. At least how many competitors (excluding Daley Thompson) must Michael Smith have outjumped in the long jump event?

1. 1   2. 2   3. 3   4. 4

### DIRECTIONS for Questions 141 to 144:
Answer the questions on the basis of the following information.

The following is the wholesale price index (WPI) of a select list of items with the base year of 1991-94. In other words, all the item prices are made 100 in that year (1993-94). Prices in all other years for an item are measured with respect to its price in the base year. For instance, the price of cement went up by 1% in 1994-95 as compared to 1993-94. Similarly, the price of power went up by 3% in 1996-97 as compared to 1993-94.

</tbody>
</table>
141. Let us suppose that one bag of cement (50 kgs) consumes 100 kgs of limestone and 10 units of power. The only other cost item in producing cement is in the form of wages. During 1993-94, limestone, power and wages contributed, respectively, 20%, 25%, and 15% to the cement price per bag. The average operating profit (% of price per cement bag) earned by a cement manufacturer during 2002-03 is closest to:

1. 40%  
2. 39.5%  
3. 38.5%  
4. 37.5%

142. Steel manufacturing requires the use of iron ore, power and manpower. The cost of iron ore has followed the All Items index. During 1993-94 power accounted for 30% of the selling price of steel, iron ore for 25%, and wages for 10% of the selling price of steel. Assuming the cost and price data for cement as given in the previous question, the operating profit (% of selling price) of an average steel manufacturer in 2002-03

1. is more than that of a cement manufacturer.  
2. is less than that of a cement manufacturer.  
3. is the same as that of a cement manufacturer.  
4. cannot be determine.

143. Which item experienced continuous price rise during the ten-year period

1. Power  
2. Cement  
3. Wages  
4. Limestone

144. Which item(s) experienced only one decline in price during the ten-year period?

1. Steel and Limestone  
2. Steel and Timber  
3. Timber  
4. Timber and Wages

DIRECTIONS for Questions 145 to 147: Answer the questions on the basis of the following charts.

(Note: Availability is defined as production less export.)
145. In which year during the period 1996-1999 was Chaidesh’s export of tea, as a proportion of tea produced, the highest?

146. In which of the following years was the population of Chaidesh the lowest?

147. The area under tea cultivation continuously decreased in all four years from 1996 to 1999, by 10%, 7%, 4%, and 1%, respectively. In which year was tea productivity (production per unit of area) the highest?

DIRECTIONS for Questions 148 to 150: Answer the questions on the basis of the data presented in the figure below.

148. During 1996-2002, the number of commodities that exhibited a net overall increase and a net overall decrease, respectively, were
1. 3 and 3  2. 2 and 4  3. 4 and 2  4. 5 and 1.

149. The number of commodities that experienced a price decline for two or more consecutive years is
1. 2  2. 3  3. 4  4. 5

150. For which commodities did a price increase immediately follow a price decline only once in this period?
1. Rice, Edible oil, and Dal  2. Egg and Dal
3. Onion only  4. Egg and Onion

</tbody>
</table>
1. The right construction would be "….help himself to the beer…."

2. Option 4 is the right answer because the correct expression is “listen to reason”, implying responding to sensible advice.

3. Option 1 is the right answer because it should have been “great on paper”.

4. The correct sentence should have read “…. runs a profitable business …” would be the right construction.

5. "Customers have to serve themselves….“ would be the right construction.

6. D is an excellent opening line, being further explained / exemplified by other ones. E and A contain a contrast between the ideas of enjoyment and brutality. Lines A and C are referring to the same Labour party, hence option 1.

7. E-C-D are logically interconnected while A-B present a contrast.

8. C-E-D make a logical trio. B further extends the idea.

9. D and A are in chronological order. E carries forward the idea of A and again C presents a related, but recent fact about the whole thing.

10. A very definitive hint is the logical link between A-D. B is a brilliant opening remark, hence the option.

11. D explains what E means. C and B are logically interconnected.

12. The right second would be one having E-D-B because they refer to chronological events.

13. E-C are logically interconnected while B makes for a good contrast with C.

14. The words “least conscious” are a dead giveaway. Obviously, you become conscious of proper decisions or enact them. Also, you are never under decisions. The right verb is face, which gives us option 4.

15. Paralyzed people do not have complex or involuntary nerves. At the most, they have some of their nerves damaged or affected.

16. The right choices should be similar in meaning, as is indicated by and. The only option that fits the bill is 2.

17. If one travels abroad, it is neither to suffer nor to explore the world.

18. You do not maximize decisions or enact them. Also, you are never under decisions. The right verb is face, which gives us option 4.

19. The rightful sentence should convey the idea of the maximum possible choice, which can result only in the presence of minimal constraints.

20. The right choices should be similar in meaning, as is indicated by and. The only option that fits the bill is 2.

21. The right choices should be similar in meaning, as is indicated by and. The only option that fits the bill is 2.

22. In all these questions, the idea is to assess whether you can gasp the essentials, leaving out secondary things, of a piece of writing. The right option should encompass the basic idea, giving it a prominent position, while relegating the less important details.

23. Option 1 is the right answer because it should have been “great on paper”.

24. In all these questions, the idea is to assess whether you can gasp the essentials, leaving out secondary things, of a piece of writing. The right option should encompass the basic idea, giving it a prominent position, while relegating the less important details.

25. In all these questions, the idea is to assess whether you can gasp the essentials, leaving out secondary things, of a piece of writing. The right option should encompass the basic idea, giving it a prominent position, while relegating the less important details.

26. The last lines of the fourth paragraph very explicitly mentions this fact.

27. Please go through the lines 9, 10, and 11 of para. 1.

28. Refer to the 4th paragraph, especially the last lines.

29. Refer to line 7, paragraph 1.

30. Please refer to the 4th paragraph.

31. The first fourth finds no support at all in the passage.

32. The line demonstrates the widening gulf between the interests of the earlier and the now generations.

33. Please refer to the third paragraph, especially the opening and closing lines.

34. The last line of the last paragraph amply justifies the conclusion given in option 2.

35. Please read the details given in the 4th paragraph, of which option 4 is not a part.

36. Refer to the last and the opening few lines of the first and the second paragraphs respectively.

37. The last line of the first paragraph makes a categorical reference in this regard.

38. Please refer to the 5th, 6th, 8th and 11th –16 lines of the second paragraph.

39. As a thumb rule, the first paragraph normally leads us to the right answer on questions like this one. Please go through the opening paragraph, which amply clarifies that the basic idea behind the author’s writing this piece is to describe the inadequacy of the PRIs.

40. The last few lines of the last paragraph indicate that the PRIs have little say in the matter of implementing schemes relevant to their specific needs because the central schemes are thrust upon them with a directive to provide matching grants.

41. The third line of the first paragraph very explicitly rules out mysticism as being a part of their artistic creations. Similarly, the second paragraphs says a lot about what actually the Greek art is like.

42. All other combinations except the second one are wrong because simplicity was an outstanding feature of the Greek art, of which Parthenon is an example.

43. Please read the 4th and 5th lines of the 4th paragraph.

44. Go through the 3rd and 4th lines of par 1.

45. Please refer to the lines starting from the 9th onwards in the last paragraph.

46. The last line of paragraph 2 clearly mentions that radars may not be used in future because on-board
computers, which will do the job earlier performed by radars, will replace their functions.

47. Line 4, paragraph 5
48. Line 5, paragraph 2.
49. In reality, the fact of the airplanes gaining in speed, stealth etc has been given as a secondary piece of information. The real idea has been given in the last lines of the paragraph, which focus only on size.

50. In reality, the examiner is asking for the right options, which finds support in the first paragraph. Please refer to the 7th line of the first paragraph.

51. We know that \(xyz = 4\). For minimum value of \(y\), we must have \(x = y = z\). Hence \(y = 2^{\frac{2}{3}}\).

52. Total codes which can be formed = \(9 \times 9 = 81\). (Distinct digit codes) The digits which can confuse are \(1, 6, 8, 9\) from these digit we can form the codes = \(4 \times 3 = 12\). Out of these 12 codes two numbers 69 and 96 will not create confusion. Therefore \(12 - 2\) = 10 codes will create a confusion. Therefore total codes without confusion = \(81 - 10 = 71\).

53. First process:

Let \(n = 3\). Then radius of the small circle = \(\frac{a}{6}\).

Area of circle = \(\pi \left( \frac{a}{6} \right)^2\).

Scrap area = \(\pi \left( \frac{a}{3} \right)^2 - \pi \left( \frac{a}{6} \right)^2\).

Total scrap = \(9 \left[ \left( \frac{a}{3} \right)^2 - \pi \left( \frac{a}{6} \right)^2 \right] - \frac{4a^2 - \pi a^2}{4}\).

54. Let radius of the circle = 1

Then in rectangle ABCD, \(AB^2 + AD^2 = 4\). By hit and trial, we get \(AB = 3\), \(AD = 1\) [since \(AB \neq AD\), which is given], hence \(AB = \sqrt{3}\), \(AD = 1\).

Now take \(\Delta\) AED and BCD.

Since \(\angle\) ADE = \(\angle\) CDB, the triangles are similar by AAS property, hence \(\frac{AE}{BC} = \frac{AD}{DC} = \frac{\sqrt{3}}{3}\).

55. Consider any one town, it is to be connected with three direct lines with two towns, which are in the same zone and one direct line with each of the other nine towns, which are outside its zone.

It totally needs \(6 + 9 = 15\) and there are 12 towns, hence the total direct points to be attached will be \(15 \times 12 = 180\), but every line will be attached to two points. Thus the telephone lines needed are \(180/2 = 90\).

57. Take the height of the vertical tower, any numerical value say 12 m. Now the angle of elevation is 45 degrees, hence the total distance will also be 12 metres (as it becomes an isosceles right triangle). Now take an angle of 60 degrees and find the distance from the foot of the tower with the help of 30-60-90 triangle, it comes out to be \(12/\sqrt{3}\) i.e. \(4\sqrt{3}\). This means the car has covered \(12 - 4\sqrt{3}\) in 10 minutes, the car will cover \(4\sqrt{3}\) in how much time. Apply the unitary method and \(4\sqrt{3} \times 10 / (12 - 4\sqrt{3})\). Simplify and get \(5\sqrt{3} + 1\).

58. Take \(\angle\) DAC as \(x\), \(\angle\) ACD also becomes \(x\) (both are equal). Take \(\angle\) BDC as \(y\), \(\angle\) CBD also becomes \(y\). \(\angle\) DCB take it as \(z\) and \(\angle\) CDA becomes \(180 - y\). Now as per the exterior angle formula \(x + (180 - y) = 96 + z\), secondly \(x + 96 + z = 180\), thirdly \(x + x + (180 - y) = 180\). Solve these three simple equation and get the value of \(y\) as 64 degrees.

59. \(b^2 - 4a\) has to be \(\geq 0\). Take \(b\) as 4, all four values can take place for \(a\). Now take \(b\) as 3, \(a\) can only be 1 and 2. Now take \(b\) as 2, \(a\) can only be 1. If you take \(b\) as 1, none of the values will make it greater than or equal to zero. Hence the total is \(4 + 2 + 1 = 7\).

60. Put the option, the second option given i.e. 1/100 makes them equal.

61. The smallest number which gives a remainder of 3, when divided by 7 is 10, then 17 and so on. The highest two – digit number which is of this form is 94. Now apply the AP formulas to see 94 is the 13th term of that sequence. Now apply the sum formula to have the total i.e. \(n/2 (a + l) \rightarrow 13/2 (10 + 94) \rightarrow 13 \times 52 = 676\).

62. \(\angle\) OCT = 90\(^°\), hence \(\angle\) OCA = 40\(^°\).

Then \(\angle\) OAC = 40\(^°\) (Isosceles \(\Delta\))

Since \(\angle\) CAB = 80\(^°\) (Ext. angle)

Then \(\angle\) OAB = 80 – 40 = 40\(^°\).

Then \(\angle\) BOA = 180 – (40 + 40) = 100\(^°\).

63. Take \(n\) as 2 or 3. Then find the sum of first 2 or 3 terms. Do put the respective value of \(n\) and check only the fourth option gives the right answer.

64. Take the value of ‘a’ as 2. Now calculate the values of P1, P2 & P3, which comes out to be 8, 4/2 & 4 i.e. the value of every P is 1/2 of the previous value of P. Calculate the values of A1, A2 & A3, which comes out to be 4, 2 & 1 i.e. the value of every A is half of the previous value of A. Take the totals by applying GP infinite formula. The sum of Ps will be \(8/(1 - 1/2) = 8 \div 1\). Simplify this and get \(8\) (\(2 + \sqrt{2}\)). Take the sum of all As \(4/(1 - 1/2) = 8\). Now before taking the ratio see in all the options the denominator is consisting of a. Now convert 8 in the form of 4a (because ‘a’ we have taken as 2). Get the ratio as \(2(2 + \sqrt{2})/1\).

65. Let\(\text{S} = \left(\frac{1}{7}\right) + \left(\frac{4}{7}\right) + \left(\frac{9}{7}\right) + \left(\frac{16}{7}\right) + \left(\frac{25}{7}\right)
\text{⇒ S} = \left(\frac{1}{7}\right) + \left(\frac{4}{7}\right) + \left(\frac{9}{7}\right) + \left(\frac{16}{7}\right) + \left(\frac{25}{7}\right)\text{\(\rightarrow\) (i)}\)

\(\therefore \text{S} = \left(\frac{1}{7}\right) + \left(\frac{4}{7}\right) + \left(\frac{9}{7}\right) + \left(\frac{16}{7}\right) + \left(\frac{25}{7}\right)\text{\(\rightarrow\) (ii)}\)

\(\text{S} = \left(\frac{1}{7}\right) + \left(\frac{4}{7}\right) + \left(\frac{9}{7}\right) + \left(\frac{16}{7}\right) + \left(\frac{25}{7}\right)\text{\(\rightarrow\) (iii)}\)
Let \( r = 30 \). Then time taken \( A_1A_2 = \frac{60}{20} = 3 \); \( A_2A_3 = \frac{60}{30} - 2 \); \( A_3A_1 = \frac{60}{15} + 4 \). Total = 9 units.

In 9 units, B travels \( 9(10\sqrt{3} + 20) = 90\sqrt{3} + 180 \)

Distance traveled by B
\( = 90\sqrt{3} + 180 \) (from previous question)

Hence B would have reached B_1. Similarly, C travels
\( C_1C_2 = \frac{60 + 60\sqrt{3}}{3\sqrt{3 + 1}} \)
\( = 60 \times \frac{3}{40} \frac{18}{4} \)

Since, \( \frac{18}{4} + \frac{18}{4} = 9 \).

This means C reaches \( C_9 \) in 9 units of time.

Since \( u^2 : v^2 = \text{Area of } A:B:C \), then the time taken to cover the three sprints are equal. Hence A would be at \( A_9 \) and C would be at \( C_9 \).

Vertical spacing = height/no. of turns = h/n

Consider the side of the cube:
By Pythagoras, we get
\( \sqrt{x^2 + (x/4)^2} = \sqrt{17x/4} \)

Length of the string
\( = (\sqrt{17x/4} \times 4) = \sqrt{17x} \)

AC 15
11 Power

Radio 12

Take the second letter as \( m \), now the first letter could be any of the five vowels and the last letter would be any of the remaining four vowels, thus \( 5 \times 4 = 20 \) strings can be made. Now take the second letter as \( n \), the first letter could be any of the five vowels and last will be only \( e \) or \( a \), thus \( 5 \times 2 = 10 \) strings can be made. Now take the second letter as \( p \), the first letter could be any of the five vowels and the last letter will be same as first letter, thus \( 5 \) strings can be made. Hence the answer is \( 20 + 10 + 5 = 35 \), 4\textsuperscript{th} option.

When the second letter is \( m \), then any of the other four vowels could be the first letters, thus \( 4 \). When the second letter is \( n \), then any of the five vowels could be the first letter, thus \( 5 \). When the second letter is \( p \), the first letter could be only \( e \). Thus the total is \( 5 + 4 + 1 = 10 \).

\[ 36 \leq n \leq 72 \]
87. 
\[ x = \frac{n^2 + 2\sqrt{n}(n + 4) + 16}{n + 4\sqrt{n} + 4} \]
\[ \therefore x = \frac{(36)^2 + 2 \times 6 \times 40 + 16}{36 + 24 + 4} \]
Which is least value of \( x \). \( = 28 \). This minimum range is defined in the 4th opt only, hence is the ans.

88. 
\[ \frac{13x + 1}{2} < z, \quad z = 5y^2 - 3 \] or \( 6.5x + \frac{1}{2} < 5y^2 - 3 \)
\[ 6.5x < 5y^2 - 3 \]
\[ Put \ x = 1, \ y = 2 \ or \ -2. \]
We find none of the values are correct.

89. 
Let \( n = 6 \). Therefore \( \sqrt{n} = \sqrt{6} \approx 2.4 \)
Then divisor of \( n \) are 1, 2, 3.
If we take 2 as divisor then \( \sqrt{n} > 2 \).
Statement A is true. If we take 3 as divisor then \( 3 > 2.4 \).
Therefore statement B is true.

90. 
As ABC and DBE are similar. Hence sides are also reduced by 35%. Sides of \( \triangle DBE \) are 0.65 and 0.65 respectively. Then area \( \triangle DBE = 34(0.65)^2 = 14.365 \). 

91. 
Starting with 100, we get:

<table>
<thead>
<tr>
<th></th>
<th>Starting</th>
<th>Destroyed</th>
<th>Built</th>
<th>New Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>2001</td>
<td>100</td>
<td>50</td>
<td>100</td>
<td>150</td>
</tr>
<tr>
<td>2002</td>
<td>150</td>
<td>75</td>
<td>150</td>
<td>225</td>
</tr>
<tr>
<td>2003</td>
<td>225</td>
<td>112.5</td>
<td>225</td>
<td>337.5</td>
</tr>
<tr>
<td>2004</td>
<td>337.5</td>
<td>168.75</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

We see from the above that 168.75 < 75 + 112.5, hence (3).

92. 
\( a = 6b = 12c \) and \( 2b = 9d = 12e \).
Dividing 1st equation by 12 and 2\(^{nd} \) by 36, we get
\[ \frac{a}{12} = \frac{b}{2} = \frac{c}{1} \] and \[ \frac{b}{18} = \frac{d}{4} = \frac{e}{3} \]
\[ i.e. \quad a \div b \div c = d \div e \]
\[ a = b = c \quad \therefore \quad b = d = e \]
\[ \therefore \quad x = 12 \]
\[ \therefore \quad a : b : c : d : e = 18 : 108 \]
\[ \therefore \quad |c| \neq \frac{9}{4} \]
\[ \therefore \quad \text{is not an integer. Hence 4th option.} \]

93. 
The only possible solution is 3, 5, 7

94. 
Volume of the box = \( l \times b \times h \)
\[ = (12 - 2x)(12 - 2x)(x) \]
Putting \( x = 1, 2, 3, 4, \)
we get the max.
value of the above eqn at \( x = 2, \ y = 128. \)

95. 
\[ AB = 12, \ AC = 8. \] Using cos rule, We have \( BC^2 = a^2 + b^2 + ab = 144 + 64 + 96 = 304. \]
\[ \therefore \quad BC = 4 \sqrt{19}. \]
Ram’s time = \( (4 \sqrt{19} + 8)/3 \)
Shyam’s time = \( (4 \sqrt{19} + 12)/2 \)
Difference = \( 2\sqrt{19} + 10 \)

96. 
Make the cycle, you can see any power of 4, divided by 6, gives a remainder of 4 in every case. Hence fourth option is the answer.

97. 
\[ \log_4 M = \log_4 N \]
\[ \Rightarrow \frac{\log_4 M}{\log_4 N} = \frac{5 \times 0.008}{0.04} \]
\[ = \frac{0.008}{0.04} = 2/3. \]
Then, \( \frac{M^{2/3}}{N^{2/3}} \) Or \( MN^8 = 9. \) Or \( N^6 = 9. \)

98. 
78 paisa can be made with the help of seven coins as \( 50 \times 1 + 10 \times 2 + 2 \times 4. \)
Similarly 69 paisa can be made with the help of five coins as \( 50 \times 1 + 10 \times 2 + 2 \times 4. \)
Thirsly 101 paisa can be made with the help of seven coins as \( 50 \times 1 + 25 \times 1 + 10 \times 2 + 2 \times 3. \)
Thus the total number of coins are 19.

100. 
Take the same perimeter as 12. And find the area of the circle as \( \frac{12}{2}\pi \), which is around 11.50. Find the area of the triangle \( 4 \times 4 \times \sqrt{3}/4 = 4\sqrt{3} \), which is around 6.8. Find the area of the square, which will be \( 3 \times 3 = 9. \) Hence \( c > a > b. \)

101. 
<table>
<thead>
<tr>
<th></th>
<th>Family 1</th>
<th>Family 2</th>
<th>Family 3</th>
<th>Family 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lady</td>
<td>Anita</td>
<td>Joya</td>
<td>Shanthi</td>
<td>Sridevi</td>
</tr>
<tr>
<td>Husband</td>
<td>Anil</td>
<td>Raj</td>
<td>Raman</td>
<td>Sunil</td>
</tr>
<tr>
<td>No. of child</td>
<td>2</td>
<td>0</td>
<td>More than 2</td>
<td>1</td>
</tr>
</tbody>
</table>

The husband, wife and no. of children info is Sunil, Sridevi - 1; Anil, Anita; Raj, Joya; Ram, Shanthi. The order of arrival of the wives is Anita, Joya, Shanthi and Sridevi.

104. 
Family of Raj is surely having more than 1 child.

105. 
The various combinations possible on the basis of the given information have the following three charts. We can see that the first and last charts are eliminated because of E being in the corner room.
109. The arrival order of the professors into the lounge is
J C - 1, J P - 5, S M - 3, S S - 2, D G - 4, P K -7 & V R - 5.

110. Above info can be used to answer this question

111. The three whom he met were J P, D G and J C.

112. The statement by PK can tell us that PK came last. He only saw J P and D G. Since he left immediately - they were the ones who would have left later.

113. The first statement tells us that A and B both made 50 and C had less. Since there was a tie, the second question about dropped catches is also required.

114. Using the first statement we can say that B and C are among the first two & A and D are among the last two. The second statement also ends up giving us the same information - we can now use the info in the question to get the order. So either is sufficient.

115. Given D * N = 600. The first statement tells us that(D+10)(N-5) = 600. Two equations and two unknowns are enough to solve for D. The second statement does not give us sufficient information.

116. f + n = 4 (k+n); M + n = 3(k + n); f – M = k + n;
From statement A, f – M =10 ; k + n =10;
f + n = 40; M + n = 30; f + M +2n = 7 × 10 = 70 years.
So statement A is sufficient to answer the question.

117. We can use the information given to make a tree. Mastermind supplies directly to A, D and G. A is the single source used by E and H. F uses both E and H for the information. E and G prove to be the source for B. E and D are the source for I. C sources from I alone, single source. The questions nos that are changed are A - 46, B - 96, C - 56, D - 17, E - 90, F - 14, G - 25, H - 92 and I - 27. This info is sufficient to answer all the questions.

118. (100-70)+(100-75)+(100-80)+(100-85)=90 Hence answer is 100-90=10

119. The arrangement that satisfies all conditions is Thu - Congress and SP, Friday - BJP, BSP and CPM. This takes into account the road blockade and no two processions on the same road. This can be used to answer all the questions of this set.

120. Number of countries having Birth rate less than 34 are 32. There are three countries with Birth & Death rate same (34, 10). All these countries will have the same rank. Hence answer is 32+1=33

121. Can be visually checked – Last 4 consecutive censuses have this value as 1.

122. Only the absolute figures are asked - they are 86 and 54 for HP and Kerala - the highest amongst all.

123. There are 5 states that fit the criterion of the question, amongst them Bihar has the sharpest decline.

124. By far, the simplest set of the entire Data section, can be answered by just checking visually.

125. Check by visual inspection

126. Excluded in the third graph are the countries B & D (whose avg. operating profit is -ve in 2001-2. The only negative choice is the answer.

135. The profits for the 4 opt are A - 180*8, C - 200 *15, E - 200*18 and F - 230*8. It is the highest for E.

136. The only false statement is 4

137. C and E are the companies that have profitability > than 10%. Their avg profit is (200*15 + 200*18)/2 = 32.5

138. The question requires us to add all the 200 m times of each of the teams and then check the difference. Since 10 is common to all the times, we can only look at the decimal parts for the calculations (0.95+0.85+0.58+0.63) - (0.78+0.75+0.94+0.36) = 0.18 s

139. Check up the column for final scores. The top 3 scores are 8905, 8897 and 8880. To get the bronze, Daley will have to get a minimum of 8881 points. He already has (582 + 3003). So the difference 8881 - 3585 = 5296 points will have to be scored in Score-2.

140. Michael Smith has 6 people who have scored less points than him. Out of these 4 of them have higher scores than him in both high jump and pole vault. So he must have scored more than them in the long jump in order to take a lead over them as far as Score-3 is concerned.

141. The selling price of cement is 104. The costs would be 20 * 1.05 + 25 * 1.08 + 15 * 1.05. The margin would be 40.25%, the difference between the two. The %ge margin comes out to be 40.25/104 = 38.5%

142. The selling price of steel is 105.5. The costs would be 30 * 1.08 + 25 * 1.06 + 10 * 1.05. The margin would be 36.1, the difference between the two. The %ge margin comes out to be 34%. This is less than the cement industry.

143. Check by visual inspection

144. Check by visual inspection

145. If you look at the entire range of years, then the answer is 1995. What is asked is 96-00. In this span of time, the ratio is highest for 1997 - 209/587. The rate of increase of numerator (exports) after that is not as much as the rate of increase of the denominator (production.)

146. The population can be determined by dividing the availability of tea (i.e., Production – Export) by the per capita availability of tea in Chaidesh. For the years in the option this comes out to be 95 - 214/487; 96 - 372/464; 97 - 378/510; 99 - 440/566. Without actually doing any division, we see that 214/487 is the lowest of the four - so the year required is 1995.

147. This question does not require any calculation. We see that the highest production is in 1999. Also since there is a decrease every year, the lowest area of cultivation would also be in 1999. It can be concluded that the productivity = Production / area would be the highest in 1999.

148. Check the starting and ending points of each of the commodities to see the overall change. Dal and oil went down, the rest increased. So ans is 4 and 2.

149. Except for edible oil, the rest experienced a price decline for two or more consecutive years, ans is 5.

150. Check visually, is true for egg and onion.
